PULL COLLAR/

PINCH COLLAR

BY B.C. BB BVBA

CHAMELEON® & HERM SPRENGER

The Chameleon® Pull Collar/Pinch Collar (CPPC®) with Herm Sprenger chain and snaps

This multifunctional collar is specially designed by Michael and Bart Bellon to fit in the Chameleon® philosophy: adapt to the environment (politically, legally, and visually...) Where it is allowed and when needed, you can transform your collar into a half choke or a pinch collar (by attaching the leash to the single ring or double ring, respectively). When used as a pinch collar, the CPPC® can be customised to how many and what type of contact points are used. Also, this device can be used as a dummy collar* for people who are getting their dogs ready to train with the Chameleon® II electronic collar (the slick best of the best electronic collar available). This collar can adapt to the political environment you are in. If you are in a country, for example, where pinch collars are illegal, you can take all the contact points out and use the collar as only a pull collar.

You can use your CPPC® as your day to day collar to snap a leash on when needed. The special design with islands reduces matting down the hair/fur of the dog.

THE CPPC® (A.K.A.* THE 5 IN 1):

This multifunctional collar is specially designed by Michael and Bart Bellon to fit in the Chameleon® philosophy: adapt to the environment (politically, legally, and visually.) This collar can be the everyday collar that the dog wears. Snap a leash on when needed. Use it as a half choke or a pull collar (by affixing the lead to one ring or two, respectively.) Where it is allowed and when needed, you can transform your collar into a half choke or dead ring pinch collar (by attaching the leash to the single ring or double ring, respectively). When used as a pinch collar, the CPPC® can be customised to how many, where, and what type of contact points are used. Also, this device can be used as a dummy collar* for people who are getting their dogs ready to train with the Chameleon® II electronic collar (top quality electronic collar on the market). This Chameleon® Pull Collar/Pinch Collar (CPPC®) can adapt to the political environment you are in. If you are in a country, for example, where pinch collars are illegal, you can take all the contact points out and use the collar as only a pull collar.

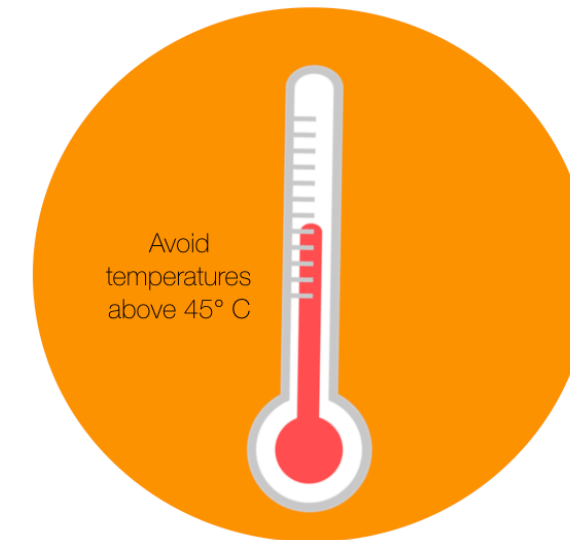

You can use your CPPC® as your day to day collar to snap a leash on when needed. The special design with islands reduces matting down the hair/fur of the dog.

*A dummy collar is used as a fake electronic collar to prepare/desensitize the dog to the real electronic collar (in this case, the Chameleon® II collar)

Due to the special design of this collar that has space between the islands, this collar will not make pressure marks on your dog's fur like flat collars normally do.

Do not expose the collar to temperatures higher than 45°C. The collar will have a warranty of two years for normal use.

This collar is not chew proof and will not be replaced in warranty if it is damaged from being chewed.

**Also Known As*

■ SMALL AND MIGHTY: THE SIZE SMALL CPPC® ■

The Chameleon® Pinch Collar/Pull Collar in the Small size is only 102 g yet has been tested to withstand at least 130 kg linear tension. Testing at the factory shows that the collar can withstand at least 300kg of pressure when around the neck of a dog.

The sizes

	Collar Length in cm	Chain Length in cm	Circumference in cm
Large	36	44	80
Medium	29	44	73
Small	23	24	47

Pull collar

Half choke

POSSIBILITIES FOR YOUR CPPC®

Half-choke set up for pinch collar

Pinch collar with dead ring

Pull collar:

Your collar is a pull collar when you attach your leash hook into the both rings. This is with no contact points on the inside, only flat plastic screws.

Half choke collar:

Your collar is a half choke collar when you attach your leash hook to one of the two rings. This is with no contact points on the inside, only flat plastic screws.

Pinch collar:

The plastic contact points delivered with your collar must be tightened by hand as a replacement for one or more of the plastic screws. The more contact points that replace the flat screws, the less the dog will feel the pressure sensation. There are two ways to attach your leash to your pinch collar:

1. the leash hook attached to both rings provide more pressure sensation on the center of the the collar
2. the leash hook attached to a single ring will provide more pressure sensation on either extremity of the collar

The Chameleon® Product Line:

Chameleon® II

Chameleon® Tactical Transmitter

Chameleon® Feather Contacts

Chameleon® Pull Collar/Pinch Collar

Chameleon® Extender

With the Chameleon® Pull Collar/Pinch Collar, you have functionality and discretion. Is it a pinch collar? Is it a pull collar? Is it a half choke? Is it an electronic collar?

It is a CHAMELEON®.
